Autodesk introduced AutoCAD LT, a less expensive alternative to AutoCAD, in March 1993. AutoCAD LT was intended for Windows-based microcomputers, embedded computers, and Windows-based portable computers. The cost of Autodesk's entry-level product is \$399. AutoCAD has since evolved to include new features and functionality, including 3D modeling and rendering, video and animation support, and network connectivity, among others. AutoCAD R14 AutoCAD R14 is the latest version of AutoCAD. The version number 14 is the decimal equivalent of the release year of AutoCAD. For example, AutoCAD 2007 is version 14.0. AutoCAD 2017 is version 16.0. AutoCAD is a relatively large (by CAD standards) application. The standard AutoCAD installation consists of a dozen or so files of several gigabytes each. A recent installation of AutoCAD 2018 for the first time exceeded 50GB on my hard drive. Autodesk has a large corporate support organization, which includes a wide variety of technical support and training services.

Installation Options There are two installation methods for AutoCAD. The first is to buy a boxed copy of the software. The second is to download a disc image of the software to your hard drive. AutoCAD can be installed on a local disk or it can be installed on a networked storage device, such as an external hard drive or a thumb drive. The method of installation does not affect the version of the software that is running on your computer.

Download and Installation To download AutoCAD, navigate to the Autodesk website, click on "Download," and follow the instructions. **Downloading AutoCAD 2017** Downloading AutoCAD 2017 is very simple. AutoCAD LT requires a few additional steps. A box with instructions for LT installation is included with the software. **AutoCAD LT 2017 Installation** Navigate to the Autodesk website and click on "Download," then "Download and Install," and follow the instructions.

Installation Modes AutoCAD LT and AutoCAD both come in a variety of installation modes. The installation mode determines whether the software is installed locally on your hard drive or is installed on a remote storage

----- Hi, I've started to play around a bit with autoconf's X11 module. I believe that it's an important security feature that IP addresses and domain names are not shown by default, since they may be used for attacks. I was wondering if it would be possible to create a configure.ac option that allows the user to provide a config file with a list of hostnames or IP addresses that are not shown by default. I'm hoping to prevent MITM attacks where a malicious server could send you a malicious request that would hide the real IP address of the server behind
