A powdered soft gel formulation for piroxicam was prepared by spray-drying, granulating and incorporation into a polyethylene glycol base. The physical and optical stability of the powdered soft gel formulation was evaluated. The melting point, glass transition temperature and X-ray diffractograms of the dry powder, the soft gels and the physical mixtures were determined. The glass transition temperature of the soft gel was 74.5 degrees C. The polymorphic form IV was found to be the most stable form of the drug in the physical mixture and the soft gel. Furthermore, the optical quality of the soft gel was investigated. Drug content and pH measurements were performed to demonstrate the stability of the drug under stress conditions.The present invention relates to a method for copying a data signal that is recorded, at a
