"The cool thing about the new match engine is the amount of information that is now available to the player," said Jake Cardwell, Creative Director at EA. "We can monitor, calculate and use every factor that makes a player great on the pitch, whether that's his pace, trickery, movement or tactical awareness. The pace at which the match unfolds is now more subtle, and when combined with the new Player Impact Engine, every hit, pass and shot will change for every player on the field." HyperMotion Technology provides a range of new features and improvements to: Player Impact Engine New Player Impact Engine uses player attributes such as his agility, speed, quickness, endurance and power to determine every move and tactic possible for a player. This results in a greater variety of tactics, more effective countering, better-timed interceptions and, for the first time in the franchise, more off-ball runs and dribbles. Instant Dribbles The new and improved dribbling system allows players to instantly execute moves such as behind-the-back dribbles, one- and two-touch dribbles and controlled dribbles. Dribbling intelligently uses the surrounding player data such as speed, acceleration, positioning and proximity, to make a calculated risk assessment of where to pass or dribble next. Accurate Physics AI and the new physics engine deliver unprecedented ball control in all game-play situations. Players can determine their best option in nearly every scenario, delivering a variety of moves such as delayed passes, shots on goal, lobbed shots, backheel passes, dribbles, offsides and more. Complete Tightening of Tactics and Player Behaviour Every action a player makes is now more relevant and meaningful to the game's tactical system. Whether players are attacking or defending, chances of individual successes are now more likely, and a player's decision making will be calculated more based on the available options. Pace at Every Speed Now every player retains his pace regardless of what game speed he is playing at. Players will run at their top speeds at all times, and a player's pace and running style will change depending on the situation he is in. For the first time, the new Player Impact Engine will adapt to speed and pace, changing both how the AI and the player reacts to that speed and how every player on the field changes their own pace and style. For example
